## DIRECTIONS FOR USE

**DIRECTIONS FOR USE:** Jewel is a pre-harvest water stain remover for use on kiwifruit to improve colour and reduce packout rejects. Jewel contains a buffered solution of lactic and phosphoric acids with a wetting agent and anti-foam.

**TIMING:** Apply shortly before harvest (i.e. 1-3 days) in good drying conditions to dry fruit. May be applied to damp fruit, but only in good drying conditions. Application rate: 5 litres per 1000 litres of water as a dilute spray. No additional surfactant is required.

**SPRAY RATE:** Use 2000-3000 litres of water per hectare. Increase rate to 4000 litres for difficult conditions (bad staining or dense canopy). Consider split applications in opposite directions through block.

**TRACTOR SPEED:** For best results maintain a tractor speed of between 3-4km/h.

**COMPATIBILITY:** Jewel is best not mixed with other materials. Avoid using with hard water.
