Water rates: Adequate water coverage is an essential component of effective foliar spraying. With all Grochem foliar we recommend a minimum of 100 litres of water per hectare via conventional ground spraying equipment or 60 litres per hectare via aerial spraying.

MIXING INSTRUCTIONS:

1. Add one quarter of the spray water to the tank and begin agitation.
2. Either pre-dissolve the powder in 5 times its volume of water or add to the inlet screen and wash into the spray tank with the remainder of the water.
3. Add any trace elements next, starting with solids, then dispersion and finally solutions.
4. Lastly add any chemicals.
5. Apply immediately. Do not store mixed chemicals.
